

RaceDay — API Endpoint Plan (Part 2)

This endpoint plan is intended to be completed before implementation. It covers the functionality explicitly described in the supplied RaceDay brief: authentication, user profiles, events, categories, event enrolments, results, and participant access to live weather and route information. The Part 2 implementation should follow these routes closely; any changes should be documented and justified.

HTTP Method	Route	Description	Role required	Request body	Expected response
POST	/api/auth/register	Register a new user account as a Participant or Event Organiser.	Public	{"name","email","password","role"}	201 Created — user details and authentication token; 400/409 on invalid or duplicate data.
POST	/api/auth/login	Authenticate an existing user and issue an access token.	Public	{"email","password"}	200 OK — access token and user summary; 401 Unauthorized for invalid credentials.
GET	/api/users/me	Return the authenticated user's profile.	Participant / Event Organiser	None	200 OK — profile object including id, name, email and role.
PUT	/api/users/me	Update the authenticated user's profile information.	Participant / Event Organiser	{"name","email","phone","location"}	200 OK — updated profile object; 400/409 for invalid data.
GET	/api/events	Browse upcoming events. Supports filtering by category, date, location and status.	Public	None	200 OK — paginated list of event objects.
GET	/api/events/{eventId}	View full details of a specific event, including venue, date, categories and route information.	Public	None	200 OK — event details; 404 Not Found if the event does not exist.
POST	/api/events	Create a new road running, walking or cycling event.	Event Organiser	{"name","description","date","location","route","status"}	201 Created — newly created event object.
PUT	/api/events/{eventId}	Update an event owned/managed by the organiser.	Event Organiser	{"name","description","date","location","route","status"}	200 OK — updated event object; 403 if not authorised; 404 if not found.
DELETE	/api/events/{eventId}	Delete/cancel an event managed by the organiser.	Event Organiser	None	204 No Content; 403/404 when applicable.
GET	/api/events/{eventId}/categories	List the participant categories available for an event.	Public	None	200 OK — list of categories for the event.
POST	/api/events/{eventId}/categories	Create a category for an event, such as 5 km, 10 km, half marathon or cycling distance.	Event Organiser	{"name","distance","entryFee","capacity"}	201 Created — category object linked to the event.
PUT	/api/categories/{categoryId}	Update an event category.	Event Organiser	{"name","distance","entryFee","capacity"}	200 OK — updated category object.
DELETE	/api/categories/{categoryId}	Remove an event category when it is no longer available.	Event Organiser	None	204 No Content; 403/404 when applicable.
GET	/api/categories/{categoryId}	View details of a specific event category.	Public	None	200 OK — category details.
POST	/api/events/{eventId}/enrolments	Enter/enrol a participant in a selected event category.	Participant	{"categoryId","emergencyContact"}	201 Created — enrolment/entry confirmation.
GET	/api/users/me/enrolments	View the authenticated participant's event entries and enrolment history.	Participant	None	200 OK — list of the participant's enrolments.
GET	/api/events/{eventId}/enrolments	View participants enrolled for an event.	Event Organiser	None	200 OK — list of enrolments/participants for the organiser's event.
GET	/api/enrolments/{enrolmentId}	View details of a particular enrolment.	Participant / Event Organiser	None	200 OK — enrolment details; 403/404 when applicable.
DELETE	/api/enrolments/{enrolmentId}	Cancel a participant's enrolment where cancellation is allowed.	Participant	None	204 No Content; 400 if cancellation is not allowed.
POST	/api/events/{eventId}/results	Submit a participant's race result for an event.	Event Organiser	{"participantId","categoryId","finishTime","position","status"}	201 Created — result object; validation error if participant/category is invalid.
GET	/api/events/{eventId}/results	View published results for an event, optionally filtered by category.	Public	None	200 OK — ordered list of published results.
GET	/api/users/me/results	View the authenticated participant's personal performance history.	Participant	None	200 OK — list of personal results with event, category, time and position.
GET	/api/results/{resultId}	View a single race result.	Public	None	200 OK — result details.
PUT	/api/results/{resultId}	Correct/update a submitted race result.	Event Organiser	{"finishTime","position","status"}	200 OK — updated result object.

HTTP Method	Route	Description	Role required	Request body	Expected response
DELETE	/api/results/{resultId}	Remove an incorrect result.	Event Organiser	None	204 No Content.
GET	/api/events/{eventId}/weather	Retrieve current/forecast weather information relevant to race day.	Participant / Event Organiser	None	200 OK — weather data such as temperature, conditions, wind and forecast time.
GET	/api/events/{eventId}/route	Retrieve route information used to help participants prepare for race day.	Public	None	200 OK — route details such as map/reference, distance, elevation or route URL.

Note: The visible supplied page references the Functional Requirements section in Part 2, but that section was not included in the uploaded screenshot. This plan therefore uses the requirements visible in the brief and includes the necessary supporting endpoints for the stated workflows.
